Major Description

Energy engineers oversee complex energy conversion and distribution systems, work to improve energy storage systems, and manage energy efficiency in building, manufacturing, and processing systems. They assess the secondary effects of energy use looking at local environmental impact, regional and national economic impact, and global climate change.

Students admitted into the Energy Systems Engineering Professional Program must relocate to the Cascades Campus (Bend, Oregon) in order to complete their professional program requirements.

Pre-Core - Courses used to calculate pre-core GPA. These courses MUST be complete prior to admission to the pro-program.

Before Pro - Courses STRONGLY RECOMMENDED before starting pro-program. Usually pre-requisites for pro-courses.

Bolded and Italized courses should be completed prior to first MECOP internship

Bolded and Italized courses should be completed prior to second MECOP internship

Energy Systems Engineering (ESE) 2-Year Program Guides for MTH 103, MTH 111, and MTH 112

Revised 03/24/2014

These 2-year program guides show the typical curriculum for students starting in Math 103, MTH 111, or MTH 112. Following these guides will keep you on track for applying to the Professional and MECOP programs. Please contact your academic advisor if you have any questions.
